

Learning with Tupperware

One simple item provides endless possibilities!

Challenge your child to empty out all your drawers of tupperware, plastic tubs and lids and then let them match them up! It's a great activity for fine motor strengthening, plus it combines the learning task of matching!

Challenge your child to use the tupperware containers as blocks. Build towers - tallest and shortest. Older children can measure - is it as tall as Mommy or Daddy? Encourage them to use their counting skills when their tower is complete.

Turn an old piece of tupperware into a toy by drilling a small hole in the bottom through which your child can push pom poms into. This activity is great for developing fine motor skills and your child can sort and count as they play.

Challenge your child to 'fit' the tupperware together. Stacking and deciding what fits inside each container is a great way for your child to develop their critical thinking skills.

Supply your child with two pieces of tupperware and all the round lids. Encourage them to sort the lids in between the two containers - by size and colour.
