

# Recycled Building

**A simple eco friendly engineering project!**

## **Materials Needed:**

- ➔ A variety of recyclables - boxes, containers, paper towel rolls, cardboard, jugs, etc.
- ➔ Imagination

**Directions:** Collect some 'safe' recyclables and invite your child to build and create with these materials.

What is great about this activity is the engineering and problem solving that your child will do to make buildings. Non-standard materials like these will invite creativity and require additional thought to actually work. Encourage your child to build towns, structures and towers with items found in your recycle box!

**Learning Value:** This activity will provide opportunities for your child to use and strengthen their critical thinking skills as they create.
